Mini Project-Online Shoppers Purchasing Intention methods applied

- Analyse the whole dataset as such
- Missing-value analysis was performed across all 18 columns. No missing values were identified.
- 125 exact duplicate rows were identified across all available fields and removed to prevent duplicate sessions from influencing the analysis.
- Integer, decimal, categorical and Boolean fields were checked
- Proper standardisation of fields were done.
- Total_Page_Visits was calculated
  =Administrative+Informational+ProductRelated
- total recorded duration across the three page categories was calculated
  =Administrative_Duration+Informational_Duration+ProductRelated_Duration
- Purchase_Status
  =IF(Revenue=TRUE,"Purchased","Not Purchased")
- Conversion_Flag
  =IF(Revenue=TRUE,1,0)
- Visitor_Segment
  =IF(VisitorType="Returning_Visitor","Returning Visitor",
  IF(VisitorType="New_Visitor","New Visitor","Other"))
- Engagement_Category classify sessions based on total page visits. Sessions were categorized into Low, Medium and High engagement based on total page visits using project-defined thresholds.
  =IF(Total_Page_Visits<=5,"Low",
  IF(Total_Page_Visits<=15,"Medium","High"))
- Pivot charts were created
  Pivot 1 — Visitor Type vs Purchase
  Pivot 2 — Month vs Purchase
  Pivot 3 — Engagement vs Purchase
  Pivot 4 — Weekend vs Purchase
- Power BI measures
  Measure 1 — Total Sessions
  Total Sessions = COUNTROWS('Cleaned Data')
  Measure 2 — Purchased Sessions
  Purchased Sessions = SUM('Cleaned_Data'[Conversion_Flag])
  Measure 3 — Not Purchased Sessions
  Not Purchased Sessions = [Total Sessions] - [Purchased Sessions]
  Measure 4 — Conversion Rate
  Conversion Rate =DIVIDE([Purchased Sessions],[Total Sessions],0)
  Measure 5 — Average Page Visits
  Average Page Visits = AVERAGE('Cleaned_Data'[Total_Page_Visits])
  Measure 6 — Average Page Duration
  Average Page Duration = AVERAGE('Cleaned_Data'[Total_Page_Duration])
  Measure 7 — Average Bounce Rate
  Average Bounce Rate = AVERAGE('Cleaned_Data'[BounceRates])
  Measure 8 — Average Exit Rate
  Average Exit Rate = AVERAGE('Cleaned_Data'[ExitRates])
